

10KV Microcomputer Integrated Relay Protection Device

As an authorized distributor of XJ Electric, XUSEN ELECTRIC is excited to introduce the WGB-871A microcomputer integrated protection device (Protection relays). This cutting-edge ...

It provides perfect protection functions for primary equipment such as overhead lines, cable lines, transformers, motors, capacitors, PT, etc. with voltage levels of 10kV and below.

WGB-150N series microcomputer motor protection device is a complete function ...

WGB-871A Microcomputer-Based Integrated Protection RelayThe WGB-871A is designed for power distribution and electricity utilization at voltages up to 10kV. It features adaptive technology and an all ...

SYK series is a comprehensive microcomputer protection device specially developed for 10kV/6kV voltage level lines and main equipment. It has applicable functions, stable performance, simple use ...

This equipment is a microprocessor-based integrated protection device with advanced features, mainly used for the protection of 10kV and below high voltage ...

SCR-201 Microcomputer Integrated Protection Device is mainly used in 10 kV and below in the protection of medium voltage switchgears.

This series of digital protection units is suitable for small current/small resistance grounding systems up to and including 10kV, providing protection, control and monitoring functions for transmission lines ...

This equipment is a microprocessor-based integrated protection device with advanced features, mainly used for the protection of 10kV and below high voltage switchgear.

The protection, measuring and control device for voltage class of 10kV and below, integrates protection, measurement, control and communication, which can realize protection of various elements and ...

WGB-150N series microcomputer motor protection device is a complete function of microcomputer motor protection device, mainly used in 10KV and below each voltage level of motor protection.

Designed to replace traditional electromagnetic relay protection, this device integrates comprehensive power system protection, real-time monitoring, and intelligent control capabilities.

10KV Microcomputer Integrated Relay Protection Device
