

AI Micro-Module Data Center

NANO Nuclear Energy (NNE) on Wednesday said it has signed a memorandum of understanding with Super Micro Computer (SMCI) to explore powering data centers with small-scale nuclear reactors. ...

This strain on an already fragile electric grid is leading technology companies to explore a once-unlikely solution: powering AI data centers with small modular nuclear reactors (SMRs).

That may be okay for tech giants like Google or Amazon, but it leaves smaller companies eager to participate in the AI boom without the capital, capacity or access needed to do so. Instead, ...

This strategic collaboration is focused on exploring the integration of NANO Nuclear's advanced microreactor systems with Supermicro's industry-leading AI server and data center ...

According to the latest research by Omdia, demand for prefabricated modular and micro data center solutions has been accelerated by AI, with Vertiv being cited as a global leader.

Tech giants commit \$10B+ to small modular reactors powering AI data centers. First SMR facilities online by 2030 as nuclear meets AI's 945 TWh energy demand.

This strain on an already fragile electric grid is leading technology companies to explore a once-unlikely solution: powering AI data centers with ...

Discover how modular design solves modern AI data center challenges, and where it delivers the greatest impact across today's computing environments.

Super Micro Computer (NasdaqGS:SMCI) has entered a partnership with Nano Nuclear Energy to explore using advanced nuclear microreactors to power its AI servers and data centers. ...

The MCPF1525 features a customized integrated inductor for low conducted and radiated noise, enhancing signal integrity, data accuracy and reliability of high-speed computing, helping ...

Small modular reactors (SMRs) can help us to reliably power AI data centers. But AI can also help us enhance the design of SMRs. Pairing the two together just makes sense.
