An optical transport network (OTN) is a digital wrapper that encapsulates frames of data, to allow multiple data sources to be sent on the same channel. This creates an optical virtual private network for each client signal. ITU-T defines an optical transport network as a set of optical network elements (ONE) connected by optical fiber links, able to provide functionality of transport, multiplexing...

Enterprises in Brazil are increasingly using OTN for secure, high-capacity data interconnects and disaster recovery solutions. DWDM and coherent optical technologies are ...

Brazil's Optical Transport Network Equipment market encompasses hardware and software systems that provide high-capacity, standards-based optical transport using ITU-T G.709 ...
