

Capturing Data from Switch Access Ports

Using the following topology as an example, we will learn how to configure port mirroring in Omada routers or switches operating in controller mode. This article uses Wireshark as a packet ...

When the packet capture process begins, the sniffer captures data packets as they transit over the network and stores those copies for examination. The below captures commands are ...

The packet capture facility allows network administrators to capture the packets flowing to, through, and from the device, for further analysis.

Packet capture is available to administrators with full organization or full network access, and to Switch Port Manager admins only when the custom role has Allow packet capture enabled. ...

You can capture packets without buying any special equipment because your switch can forward copies of passing traffic. This process is called port mirroring. Find out what it is and how to ...

The objective of this article is to provide information about configuring Switchport analyzer (SPAN) and Remote Switchport analyzer (RSPAN) on N ...

Port mirroring is a feature of managed switches that allows you to copy the network traffic from one or more ports (or VLANs) and send it to a specific port where a network analyser, such as Wireshark, ...

Learn how to configure Switched Port Analyzer (SPAN) port mirroring on Cisco, Arista, and Linux systems using tc to copy traffic from monitored ports to a capture device running ...

To aid in debugging issues, we would need a capture of both of these streams of data. It is important to note here which port is selected, and which port on your controller the switch is connected to.

Wireshark is a free and open-source software for capturing and analyzing Ethernet data traffic. The software displays the individual data packets in detail, enabling analysis of the individual data ...

Simply put, SPAN duplicates traffic from one or multiple Cisco switch ports (or VLANs) and forwards that duplicated traffic to a designated monitoring port. You can then connect analysis ...
