

Read a basic explanation of gas analysis in this animated guide to FTIR transmission spectroscopy.

This GCMS primer explains the fundamentals of gas chromatography mass spectrometry, and provides the basics of GC/MS theory and technique for the gas chromatograph (GC) and the mass ...

Mass spectrometry (MS) is ever-present in gas analysis. It is a go-to solution for precisely identifying and quantifying gas components. MS works by ionizing gas molecules and separating the ...

A spectrometer is any instrument used to view and analyze a range (or a spectrum) of a given characteristic for a substance (e.g., a range of mass-to-charge values as in mass spectrometry), or a ...

A sample is analyzed in a mass spectrometer by ionizing the sample and separating ions of differing masses and recording their relative abundance by measuring intensities of ion flux. A typical mass ...

OPSIS gas analysers use spectrometers to separate light into wavelengths, enabling the detection of light absorption and gas concentrations. Let's explore how a spectrometer works!

Over the past forty-fifty years, since mass spectrometry has become a standard tool, libraries of mass spectra have been generated. The newest libraries contain hundreds of thousands of EI mass ...

The diagram below shows a typical path for the gas to flow through the spectrometer. A diaphragm pump creates a vacuum, pulling the sample through a heated sample line into a heated gas cell to ...

In this review, we give an overview of recent advancements and achievements since their introduction eight years ago, focusing on the development of iHWG-based mid-infrared sensor technologies.

This GCMS primer explains the fundamentals of gas chromatography mass spectrometry, and provides the basics of GC/MS theory and technique for the gas ...

Every gas mass spectrometer requires the same common functions to perform an analysis: sample introduction, ionization, mass separation, and detection (Fig. 1). Each function can be achieved ...

Gas spectroscopy is defined as a technique used to analyze the composition and properties of gases through methods such as Raman gas spectroscopy, which allows for the detection of various gas ...

Core of Gas Spectrometer
