Customization Process for New Fiber Optic Channels in Mining

The Custom Objective Function enables the user to account for these device-specific characteristics within the optimization process to ensure maximum power on the most critical channels in an optical ...

For reliability, performance and protection, industry leaders turn to AFL for fiber optic products that are designed for use in the most extreme conditions. With more than three decades of experience, AFL ...

Introducing the entire process of customizing fiber optic products for our international customers, along with a step-by-step flowchart illustrating how it works.

Aimifiber will listen to your fiber requirements and work with you to define performance requirements, specifications, and deliverables. At each stage, our design team will collaborate, share designs and ...

Amphenol Fiber Systems International (AFSI) builds custom fiber optic cable assemblies for virtually any applications. The Star-Line EX® is a hybrid connector certified for use in a Zone 1-IIc hazardous ...

All custom assemblies are made in the USA using genuine premium material and industry leading precision equipment. Each connector is tested and visually inspected to meet or exceed current ...

This case study demonstrates how MGXTSV cable was successfully deployed in an underground mining communication network to improve safety and operational efficiency.

This three-day class has been developed with 12 hours of classroom lecture and 12 hours of hands-on skills labs to provide the practical understanding and skills required to properly design, install and ...

Available with a multitude of storage and deployment accessories, the MARS system allows mining operations to easily replace fiber optic segments with limited down time.

AFL"s products are in use in over 130 countries and include fiber optic cable and hardware, transmission and substation accessories, outside plant equipment, connectivity, test and inspection equipment, ...
