

# Dual-core LC optical modules need to be paired

This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications.

This SFP Dual Wavelength Single Mode LC Type module spans distances of up to 10 kilometers (6.2 miles). The SFP interface is compatible with standard SFP slots and supports a 1000 Mbps-LX ...

The 2-fiber Lucent Connector or LC duplex is typically used for a single-channel links using a transmit fiber and a receive fiber. This applies to multimode and single mode optics.

SFP+ optical transceiver modules provide a transmission rate of 10.31 Gbps and use LC connectors. 10G BiDi transceivers always require paired sets: a -U must pair to a -D on the opposite end of the ...

A duplex LC connector is a fiber optic connector configuration that combines two LC connectors in a single paired interface. Each connector terminates one optical fiber, allowing ...

Read the definitive 2026 guide on SFP modules. We explain Single Mode vs Multimode, DDM diagnostics, and how to choose the right transceiver for Cisco, Juniper, and more.

The duplex clip is the simple yet effective feature that physically bonds the two LC connectors together, ensuring they remain a matched pair and preventing them from being ...

Just drop us a message. ? Never use a multimode patch cord with a single-mode transceiver -- you'll get severe signal loss. ? Always check polarity for MPO-based modules.

LC simplex and duplex connectors are used for equipment cross-connects or interconnects in backbone, horizontal and work area applications for high-speed data transmissions.

Fiber communication relies on light transmission in one direction per core. A duplex LC connector pairs two fibers: One fiber handles Tx (transmit). The other handles Rx (receive). Correct ...
