

# Extinction ratio of 10G 1550nm optical module

Extinction is the dying out of a species. Extinction plays an important role in the evolution of life because it opens up opportunities for new species to emerge.

Extinction is the flip side of evolution. Just as every organism that lives will die, every species that evolves will eventually go extinct. In some cases, it is subtle, as when one species is ...

The meaning of EXTINCTION is the act of making extinct or causing to be extinguished. How to use extinction in a sentence.

Extinction is the death of all members of a species of plants, animals, or other organisms. One of the most dramatic examples of a modern extinction is the passenger pigeon.

Extinction, in biology, is the dying out or extermination of a species. It occurs when species are diminished because of environmental forces (natural or human-made) or because of ...

Species that are not globally extinct are termed extant. Those species that are extant, yet are threatened with extinction, are referred to as threatened or endangered species. The dodo of Mauritius, shown ...

No species lasts forever -- extinction is part of the evolution of life. But at least five times, a biological catastrophe has engulfed the planet, killing off the vast majority of species from...

Extinction: Directed by Ben Young. With Michael Peña, Lizzy Caplan, Amelia Crouch, Erica Tremblay. A father has a recurring dream of losing his family.

Learn what extinction really means in biology and psychology, what causes species to disappear, and how today's extinction rates compare to historical mass extinctions.

Extinction is the permanent termination of a species. When a species becomes extinct, all its members have died, marking an irreversible end to a unique evolutionary lineage.
