Fiber Optic Cable Angle Pole

Installation is similar to installing a messenger wire except it also includes a fiber optic cable that requires careful handling like any other fiber optic cable.

Fits all fiber cable up to 1.50" OD. Tie eyelets designed to accomodate both stainless steel and tie wrap securing methods. Radius ends to ensure no sharp corners. Outward facing channel and minimal ...

Fiber optic cable sequential numbers are required at each pole location and vault wall. Sequential numbers will identify conduit length, and slack left in vaults and at poles.

Aerial optical cable is suspended in the air from poles and/or support structures. Most often it is supported between poles by being lashed to a wire rope messenger strand with a small gauge wire.

Sufficient clearance must be maintained between fiber optic cables and electrical power cables on joint-use poles. Existing dead-end pole must also be evaluated to determine their ability to ...

Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. Aerial installation is generally much less ...

The design provides a 1-5/8" clearance from the surface of the pole to the cable and 3-3/4" clamping surface length. Material: Hot Dipped Galvanized, Ductile Iron

ADSS (All-Dielectric Self-Supporting) hardware and overlashing components are specifically designed for use with ADSS fiber optic cables in overhead telecommunications and power distribution networks.

This document provides standards and guidelines for aerial installation of fiber optic cables including pole setting, grounding, cable runs between poles, and fiber optic cable handling.

ADSS LITE DEAD-END FOR FIBER CABLE ADSS POLE CLAMP ALUMINUM TRUNNION SUPPORT FOR ADSS FIBER CABLE J SUSPENSION BRACKET FOR ADSS FIBER OPTIC CABLE POLE ...
