

Fiber Optic Cable Situation Awareness System

It detects vessel movement, anchor drag, diver activity, and other mechanical disturbances that threaten critical underwater infrastructure (CUI). This fiber optic sensing solution enables the physical ...

At Sonosonic, we're at the forefront of this innovation, developing and refining new DAS capabilities that provide increased situational awareness for rail security and operations teams.

This article explores a game-changing solution that leverages fiber optic cable infrastructure to provide real-time situational awareness and protect underground assets.

Opti-Guard(TM) takes fiber optic intrusion detection to the next level. A single device can monitor inside and outside plant applications with multiple detection methods, multiple sensor types and supports ...

Protect critical infrastructure with Lumetec's advanced fiber optic sensing technology. Transform static subsea and terrestrial networks into a real-time awareness network to detect threats and prevent ...

FIBERMARS project, funded by EDF, advances fiber optic technology for improved maritime situational awareness.

The project "Using fiber optical cables for maritime situational awareness" (FIBERSENSE) will focus on and advance the Distributed Acoustic Sensing (DAS) technology. DAS exploits the laser ...

The Technology DAS interrogates standard fiber-optic cables using pulsed laser signals.

This article explores a game-changing solution that leverages fiber optic cable infrastructure to provide real-time situational awareness and protect ...

Due to their ability to measure several different physical parameters, fiber optic sensors are recognized as an important enabling technology and offer many interesting opportunities to ...
