

Fiber Optic Circulator Series Products

Our Single Mode (SM) and Polarization-Maintaining (PM) Circulators are ideal for advanced communication systems and fiber sensor applications. Our single mode circulators also include a ...

Optizone Technology develops and produces Fiber Optical Circulators in various package sizes and various powers. In particular with the PM circulators, Optizone can provide with high isolation and ...

OZ Optics" PM fiber optic circulators are manufactured with polarization maintaining fibers, making them ideal for polarization maintaining applications such as 40 Gbit systems or Raman pump applications. ...

We offer a comprehensive selection of fiber optic isolators and circulators, perfected over 25 years of volume production to cover most application scenarios.

Thorlabs" Single Mode (SM) Optic Circulators are non-reciprocating, one directional, three-port devices that are used in a wide range of optical setups and for numerous applications.

****Researching Fiber Optic Circulators? Start with this definitive resource of key specifications and things to consider when choosing Fiber Optic Circulators**

Fiber Optic Circulators Features: o Low insertion loss o Miniature packages o High power handling o Wide wavelength range o Low cross talk o Center wavelengths 780, 850, 1060, 1310, 1480, 1550 nm o Low ...

Our No-Tail circulators mount easily to optical tables and can withstand frequent handling. Four strong magnets hold the rugged package securely onto steel surfaces.

A fiber optic circulator is a multi-port component designed to let light transmit in only single direction from port1 to port2, then from port2 to port3, and reduce the back reflection and back scattering in ...

Fiber Optic Circulator is a passive optical device that allows light to circulate through a fiber optic cable in a specific direction. Fiber Optic Circulators from the leading manufacturers are listed below. Use ...
