

To achieve further efficiency improvements, a data center should be designed as aisle containment, separating warm from cold air. By using the SCHROFF standard containment system in combination ...

The aisle containment system is a modular rowbased thermal containment solution, which separates cold and hot data center air streams to and from equipment. It manages airflow at the source, ...

In the Speedbone Data Center, the racks are not placed freely in the room but grouped into so-called cold aisle islands. This ensures that the cold air supply through the raised floor only needs to be ...

CONTEG's aisle containment solution leverages a modular system that separates cold air from hot exhaust air to create an enclosed cold space. This space prevents the mixing of cold and hot air and ...

With the Conteg Contained Cold Aisle (CCA) solution, a containment system is used to physically separate cold air from hot exhaust by forming a cold plenum space that prevents hot and cold air ...

Find out how to improve your data center infrastructure efficiency, using the cold aisle containment or hot aisle containment solutions from Vertiv.

Our aisle containment systems are vendor agnostic, featuring innovative, transparent panels that are lightweight and easily attached horizontally or vertically to cabinets using a universal rail system. ...

By maintaining consistent, predictable temperatures, cold aisle containment minimizes thermal stress and reduces the risk of overheating, improving reliability and extending equipment lifespans.

Our comprehensive portfolio for Cold aisle and hot aisle containment and mesh partition walls combines the necessary energy efficiency with modular flexibility. Additionally, we also offer custom solutions ...

Door Options A choice of door options is available for use with the aisle containment system to provide the right combination of safety and security. Dual sliding doors or Vertical doors can be chosen for ...
