

How many wires should be connected to the cold-joint

The distance between the wire insulation and the soldered connection should be between 0D and 2D or 1.5mm, whichever is greater. A greater distance is considered a defect for ...

In this guide, we'll walk you through identifying cold solder joints, repairing them, preventing future issues, and optimizing your soldering process ...

Choose a size which is no more than twice the diameter of the joint you need to insulate, and don't forget to slip it onto one of the wires before you join them!

Soldering involves melting a low-temperature metal alloy over a joint or wire splice to secure 2 pieces together without the risk of them coming undone. If you want to combine 2 wires, you can easily use solder to make a connection that will last for a long time.

This article will provide you with a comprehensive guide to solder joints, systematically explain the types of solder joints, the characteristics that a good solder joint should possess, ...
