

# How to configure the uplink of the access switch

The UplinkFast feature is designed for access layer switches--those at the edges of the spanning tree. It allows these switches to quickly switch to a backup uplink if the main (root port) uplink goes down, as ...

Discover the meaning and key differences between uplink ports and normal ports and how they work in modern Ethernet switches.

The uplink port on the access switch should be configured identically, otherwise VLAN mismatches will result. The access switch will also need to be configured appropriately to place client traffic in the ...

Provides an overview and configuration of various uplink types such as ethernet, cellular, and Wi-Fi.

Use the procedures described in this topic to set up Virtual Chassis ports (VCPs) to connect two switches together in an EX Series or a QFX Series Virtual Chassis.

Connect your mobile device to the WiFi network of the router or access point. Open the NETGEAR Insight app. If you do not have a NETGEAR account, tap CREATE NETGEAR ACCOUNT and follow ...

This workflow describes how to configure the Ethernet interfaces that connect a switch or switch stack to distribution switches or routers. These interfaces are uplink interfaces.

Switch normal ports, also known as downlink or downstream ports, connect access layer devices such as computers, printers, and Access Points. Devices enter and exit the network through ...

If you google cisco voice vlan you will find good guides explaining the configuration and commands for the access 3850 switch. Doing some research on spanning-tree will also help and ...

Provides an overview of the procedures for configuring uplink interfaces, uplink preferences and switching, and enabling 802.1X authentication on uplink ports of an Instant Access Point (IAP).

Uplink ports are used to connect APs to the access switching layer. Depending on the AP model, an AP can be connected using a single uplink port or dual uplink ports operating in an active / ...

&#183; Configure Layer 2 static link aggregation for the two uplink interfaces connecting the AP and the access switch. Configure load balancing based on source and destination MAC addresses for data ...
