

This paper explores these challenges, and details the design of a transimpedance amplifier (TIA) for 64 Gb/s PAM-4 optical links.

Our solutions include transmitter modulator driver amplifier modules and receiver transimpedance amplifiers (TIAs) for high-performance optic equipment that is critical for long-haul, ...

These products include high performance modulator drivers, transimpedance amplifiers, clock/data recovery circuits, APD and PIN photodiodes, FP and DFB lasers, Silicon Photonics, and PAM4 PHYs.

Powering the fastest networks on the planet: Marvell's transimpedance amplifiers (TIAs) ushered in the era of 100G and 200G networking and continues its market leadership with 400G, 800G, and beyond.

In this article, we design a TIA in 28-nm CMOS technology while targeting the following specifications: power consumption 15mW. The choice of the noise and gain values becomes clear after we delve ...

To make 40G and 100G equipment available, a whole new batch of special components is necessary to meet those data speed requirements. One critical part is the transimpedance amplifier (TIA)...

A transimpedance amplifier (TIA) is realized in a 0.18- $\mu$ m CMOS technology to demonstrate this design approach. In addition to the bandwidth enhancement, TIA designed with PIP presents a trend of ...

GigOptix, Inc. (OTCQX:GGOX) says it is sampling its new GX3122B dual-channel linear transimpedance amplifier (TIA) designed for use in 40-Gbps DWDM coherent optical receivers.

In this series of blog posts, I will show you how to compensate a TIA and optimize its noise performance. For a quantitative analysis of a TIA's key parameters, such as bandwidth, stability and noise, please ...

GigOptix launched new family of Transimpedance Amplifier (TIA) for 10G, 40G and 100G receiver applications.

The DSC-R401HG is a linear and versatile PIN + transimpedance amplifier suited for a variety of digital and analog applications. The R401HG offers a linear response to  $\pm 3$  dBm optical input, 600mVp-p ...
