

New Adjustable Attenuator for Rail Transit

We offer a robust portfolio of in-stock, adjustable RF attenuators and phase shifters for multiple applications, including test instrumentation, cellular communication, wireless communications, ...

Over 400 attenuator models for 50-Ohm & 75-Ohm system including fixed, high-power, digital step / programmable, voltage variable and more! Stocked for shipping.

By providing a comprehensive perspective on AMM-based railway noise and vibration management, this review highlights their transformative potential in advancing railway engineering. ...

In rail transit, attenuators are deployed in base stations along tracks and on-board train modules to adjust signal levels: they prevent overloading of receivers due to proximity to transmitters, reduce ...

Analog Devices" RF attenuators are available in a broad range of architectures and form factors, giving designers the flexibility to select a part that best aligns with their system requirements.

Our in-line attenuator is customized to match the desired length and connector type specified by customers. The adjustable attenuator utilizes an air gap mechanism to regulate the attenuation value ...

High-performance and weather resistant antenna solution made for commuter bus and rapid transit systems. Custom engineered to last in harsh environment conditions.

Specifically engineered for use directly on rail tracks, Decidamp RTD provides an effective way of reducing rail vibration, and consequently airborne noise, produced by passing trains.

In the case of implementing the Sintra rail line, due to issues related to rainwater drainage, the infrastructure management company opted to raise the original ballast platform to accommodate the ...
