

Such connections can help to balance out supply and demand across regions, which will be increasingly important as variable renewables like solar and wind make up a larger share of electricity generation.

Norway's electricity generation is based on almost 100 per cent renewable energy. In 2023, it was based on 89 per cent hydropower and 9 per cent wind power. At the beginning of 2023, the power supply in ...

As more Power Electronic Interfaced Devices are introduced, the technical characteristics of the Nordic power system change rapidly, affecting system stability, reliability and resilience.

Statkraft and Hydro agree two major decade-long power purchase contracts delivering 12.3 TWh to secure energy for Norway's aluminium industry

ABB has been awarded a contract for the supply of control and apparatus systems for Hydro Energi's pumped storage power plant currently under construction in Illvatn, approximately ...

Statnett is the transmission system operator in Norway, operating 11,000 km of high power lines. There are plans to upgrade the western grid from 300 to 420 kV at a cost of 8 billion NOK, partly to accommodate cables to Germany and England. Norway has an open electric market, integrated with the other Nordic countries over the Synchronous grid of Northern Europe. Export and import is routine over the direct power links to Sweden, Denmark...

Hitachi Energy and Statnett deliver Norway's first SF6-free high-voltage grid connection in Oslo, advancing the country's Net-Zero goals and boosting transmission capacity.

The company specializes in providing temporary power supply for construction projects of all sizes. They offer not only provisional electricity but also infrastructure solutions like battery chargers, machine ...

Integration with other countries' power systems, the well-developed power grid and the characteristics of hydropower production make Norway's power supply system very flexible, reducing ...

A well-developed electricity grid makes it possible to transmit power from the hydropower plants in the southwest and north to consumers in other parts of Norway and abroad.

Norway has an open electric market, integrated with the other Nordic countries over the Synchronous grid of Northern Europe. Export and import is routine over the direct power links to Sweden, ...
