A new Z-shaped bridge under construction near Polo Ground in Indore incorporates two sharp 90-degree turns, one step ahead of the Bhopal's 90 Degree bridge. The project has drawn ...

When the bridge and the roadway approaches are a small obstruction to the flow, and the bridge opening is not acting like a pressurized orifice, the energy-based method should be used.

With the construction of divided highways, a common modeling problem involves parallel bridges (see figure below). For new highways, these bridges are often identical structures.

In this paper, an attempt is made to simply and systematically generate strut-and-tie models for two-dimensional (2-D) and three-dimensional (3-D) disturbed or discontinuity (D) regions ...

In this study, experimental and discrete element methods were used to investigate the effects of angle of Z shape non-persistent joint on the compressive behaviour of joint's bridge area.

The parallel flanges of Z-Shapes provide excellent resistance to bending and shear forces, ensuring structural stability and load-bearing capacity. The vertical web contributes to the overall ...

The present invention relates to a Z-shaped bridge head butt plate structure, which comprises a Z-shaped butt plate main body arranged in the fill soil behind the abutment.

The sheets contain pre-engineered details for a variety of structural systems, such as earth retaining systems, bridge railings, and underground structures. Bridge standard details are not Standard Plans ...

The beam elements are used to model the bridge superstructure in the longitudinal direction and the bridge bents/piers in the transverse direction. Its analysis is based on the linear elastic small ...

Congress leader Sajjan Singh Verma says that the manner in which the design of a bridge has been revealed in Indore after the Aishbagh Bridge in Bhopal, it seems to open the pole of ...
