

This paper explores the core tenets of Russian military strategy and associated operational concepts, situating its role within the Russian system of knowledge on military security.

Bylina is a Russian automated electronic warfare control system that uses artificial intelligence based on machine learning to identify priority targets and suppress their electronic signals.

Kateryna Bondar examines how Russia conceptualizes, builds, and adapts its command and control (C2) architecture under wartime pressures, in the first installment of a series on Russia's ...

Russia certainly poses a threat to our Baltic States allies. Russia's large army can overrun the Baltic States quickly, and Russia's A2/AD capabilities ...

First, even as the United States and European nations worry about Russian anti-access/area denial (A2AD) strike concepts and capabilities, Russia is prioritizing a EW-based ...

When the Russian army stormed into Georgia in August 2008, we lacked detailed knowledge of its capabilities. Our technical systems were even challenged to locate the limits of the Russian advance.

Our Russian IADS Redux series examining the country's strategic integrated air defence system comes to a close with a look at the electronic warfare capabilities it depends on.

Russia certainly poses a threat to our Baltic States allies. Russia's large army can overrun the Baltic States quickly, and Russia's A2/AD capabilities pose a threat to American military aircraft ...

The power ministries are also staying in the same hands. Sergey Lavrov, who has been foreign minister since 2004, remains in office, despite periodic rumors of his imminent retirement.

Russia's Super-EMP weapons--that have no counterpart in the U.S. nuclear arsenal--and Russia's superior defensive preparations against HEMP, may have emboldened the Russian Duma in 1999 to ...

Russian EW systems like the Krasukha-4 and R-330Zh Zhitel can disable GPS or radars on Ukrainian drones, but it's not substantially different from shooting down aircraft with guns.
