The 5P-42 Filin (eagle owl) is a Russian electro-optic countermeasure system developed by Roselectronics for the Russian Armed Forces. The system is designed to disrupt the enemy combatants' eyesight at night and prevent them from targeting a protected platform. Besides that, it is also capable of suppressing night vision devices, laser rangefinders, anti-tank missiles, and other electro-optical sight systems. It was first unveiled in December 2018, and its naval version is currently being deployed at the
