

Smart Solutions for Power Supply Systems at Canadian Telecom Sites

Smart Power Distribution Units (PDUs) can reduce energy consumption by 15% and improve equipment uptime by 20%. Each telecom device has unique power needs; matching power ...

Telecom companies, data centers, and critical infrastructure operators rely on LiFePO4 batteries to power backup systems, off-grid sites, and remote communication towers, ensuring continuous ...

From the Inuit community in Nunavut to the oil sands mining area in Alberta, this technology that can operate stably in a -50° environment is redefining the survival standards of ...

This cutting-edge firm was established by John Tuerk, Miriam Tuerk, and Mark Windrim in Toronto, Canada, with a mission to provide clean, affordable, remotely controlled wireless ...

We leverage our long history and experience in reliable, rugged outdoor power systems within the Telecommunication and Cable industries, engineering reliable back-up power solutions that protect ...

Telecom DC power systems provide uninterruptible DC power for telecommunication networks and equipment. Staticon pioneered the design and application of integrated, high DC power systems in ...

The solution enables service providers to cluster and orchestrate the network sites as a virtual power plant among other applications, allowing CSPs to participate in various utility plans in ...

Based on an "integrated AC + DC intelligent power distribution" architecture, this solution aggregates site energy usage and operational status into a management platform via modular metering and ...

Emtel Energy delivers intelligent telecom energy solutions using electrostatic energy storage technology. Instead of relying on short-life chemical batteries or constant diesel usage, our systems are designed ...

We also offer integrated power solutions for intelligent video surveillance systems and solutions for site sharing of tower vendors. Our solutions simplify site deployment, increase networks' energy ...
