

Swiss Intelligent Cold Aisle Installation Solution

Simple, fully integrated infrastructure - Racks, precision cooling, monitoring, cable management and power systems designed to work together, saving you time and money on installation and operation. ...

Cold Aisle Containment or CAC is a proven, relatively easy to deploy solution for effectively managing airflow within a data centre. A CAC system surrounds the cold aisle and it keeps cold supply air ...

Cold aisle containment works in virtually any data center using traditional air cooling, but some facilities see faster returns than others. If you're delivering cold air through a raised floor with perforated tiles, ...

A cost and energy efficient aisle containment solution that will keep your data center investment working longer. Major savings can be made by separating and circulating the hot and cold air flows.

Door and roof components separate hot and cold air in the data centre. Such a separation is pivotal to increasing the efficiency of climate control technology. It may be used as a hot or cold aisle ...

Our modular systems provide flexible, secure separation between hot and cold aisles or controlled zones to maintain optimal environmental performance.

Demand for cold aisle containment in Switzerland is propelled by a confluence of regulatory, economic, and technological forces. The primary and most persistent driver is the ...

We design and install hot aisle and cold aisle containment systems to optimize datacenter cooling efficiency and reduce energy costs by up to 40%.

The goal of a hot or cold aisle configuration is to conserve energy and lower cooling costs by managing air flow. Designing the proper containment system requires lining server racks in rows (or aisles) with ...

Get expert hot and cold aisle containment solutions for your data centres with Ardmac. Our tailored approach maximises efficiency.
