

The protection panel of the distribution box cannot be closed

Unused openings for circuit breakers must be closed using identified closures (or other approved means) which provide protection substantially equivalent to the wall of the enclosure [Sec. 408.7].

To avoid the risk of direct contact, the panel cannot be opened without first disconnecting the power supply. This means that de-energized live parts do not have to meet any degree of ...

I contend that in order to disconnect the power to the distribution panel, you have to open both the normal and generator circuit breakers (cannot be disconnected by a single breaker).

Electrical panels must be easily accessible. They should not be located in confined spaces such as bathrooms, closets, or above stairways. Proper positioning and clearance around ...

Electric equipment shall be installed in a neat and workmanlike manner. Unused openings in boxes, raceways, auxiliary gutters, cabinets, equipment cases, or housings shall be effectively closed to ...

All electrical panels require a cover, called a dead front, to prevent touching any of the electrified ("live") parts inside. The panel's circuit breaker switches should stick through openings in ...

It is unacceptable to be subjected to additional dangers by working around bicycles, boxes, crates, appliances, and other impediments. Don't work in such an area until these items are removed.

Inspect electrical panels and switchboards for signs of wear, corrosion, or damage. Look for loose connections or burnt marks, which can indicate underlying problems.

Panelboards must be protected by an overcurrent protective device not exceeding the panelboard's rating. This device can be located within or on the supply side of the panelboard. Exceptions are ...

Obstructions: The panelboard's working space must be kept clear and not used for storage. No obstructions like pipes, cabinets, or doors can block access to the panel.
