

# Ultrasonic Measurement Optical Cable

NDT Supply stocks hundreds of UT cables with all common connectors and cable lengths. Our cable shop can build custom cables with quick delivery and at a reasonable price.

Enhance your ultrasonic inspection capabilities with high-quality probes and cables from AJR. As a premier supplier in the NDT industry, we offer a wide range of products designed for durability and ...

Find a wide range of probes and compatible cables for accurate flaw detection and thickness measurement across various industries.

Cables PROFI are reliable high-quality cables intended for switching ultrasonic transducers with ultrasonic flaw detectors and thickness gauges. PROFI cables combine the very high chemical and ...

Our probe cable is engineered for precision, durability, and reliable performance in demanding testing and measurement environments. Made from high-grade materials and manufactured using advanced industrial processes, it ensures ...

TE's cable assemblies are designed to be compact, durable, flexible and lightweight while reducing signal resistance. Connect to a higher standard of signal clarity.

Ultrasonic testing cables and connectors make it possible to pair a large variety of equipment and transducers to complete an effective combination for the task. Test Equipment Distributors team can ...

Recommended cable length for thickness gauging is five foot/1.5 meter, and 6 foot/1.8 meter for flaw detection. Custom UT cables are available in different lengths and connector combinations. Backed ...

Single Ultrasonic Probe Cables YUSHI ultrasonic cables are far more than simply RG174 or RG58 cables with an outer jacket, we enhance them to ensure superior performance and reliability:

Berg offers a wide range of Ultrasonic Cables that vary in connector type, length, and thickness. With increased durability, armor jacketed cables are available for in-field applications in harsher ...
