

# Visible Spectrometer

Browse a full range of UV-Vis Spectrophotometers products from leading suppliers. Shop now at Fisher Scientific for all of your scientific needs.

VIS spectrometers are used to analyze samples in the visible spectrum (typically 400-700 nm). VIS instruments utilize a light source and a spectrometer to measure the absorbance or emission of light ...

The V-700 Series of UV-visible/NIR spectrophotometers has been developed to cover every aspect of routine and research measurement, flexible, durable and easily maintained.

A UV-Vis spectrophotometer is an analytical instrument that measures the amount of ultraviolet (UV) and visible light that is absorbed by a sample. It is a widely used technique in chemistry, ...

Instruments of various sizes used to measure the amount of ultraviolet and visible light absorbed by a sample. Product applications include quality control, nucleic acid/protein quantification, analysis of ...

Compact, versatile spectrometers covering UV, Visible and NIR wavelengths are available for lab, field and process solutions.

The HI801 iris is a sleek and intuitive spectrophotometer that allows for measurement of all wavelengths of visible light. Customize your methods, take a wide range of measurements, and feel confident in ...

Visible/ UV-visible spectrophotometers are spectroscopy instruments that monitor the interaction of a substance with light from the visible part of the electromagnetic radiation spectrum.

The Wireless Spectrometer from PASCO is specifically designed for modern chemistry, biology, and physics labs. With Bluetooth and USB connectivity, students can quickly connect from their device or ...

Find, compare, and request a quote for visible spectrophotometers across leading suppliers at Labcompare; including access to product citations, related published figures, and first-hand reviews ...
