

# Welding Bridge Machine Tilting Frame

The rotating welding table is most commonly used in manufacturing plants to make welds on long pieces of metal without having to walk back and forth between two ends.

The auxiliary welding robot is used in slave operation, among other things, for cleaning (brushing and grinding) the intermediate layers. The gantry can be moved on rails in order to equip the tilting table ...

Our modular welding tables provide a highly adaptable platform for a wide variety of welding and fabrication tasks, while frame and rail fixtures ensure accurate alignment and consistent positioning ...

The bridge unit can be equipped to automatically position and clamp the parts to be welded. It can also be supplied with mechanical, electronic or laser seam tracking equipment.

Major Component A. The whole machine structure of the equipment is inverted gantry type, using four reducer to drive the lifting chain to drive the workpiece turnover.

Custom steel beam welding for applications like: engineered metal buildings, pre-engineered steel buildings, shipyards, semi truck trailers / tractor truck beds, bridges, and platforms. You can now ...

This specialized tilting machine is an absolutely vital piece of equipment, designed to clamp the massive truck frame securely and rotate it through 360 degrees, bringing every weld joint ...

The auxiliary welding robot is used in slave operation, among other things, for cleaning (brushing and grinding) the intermediate layers. The gantry can be ...

This automatic tilting mechanism for welding machine can adjust the vertical height of returning face plate when turning over the returning face plate, makes the different welding demands...

This section first describes the basics of welding, with an emphasis on arc welding because this type of welding is most common in steel bridge fabrication. Following the basics, the common welding ...

The machine is used for submerged, TIG and metal gas welding applications. The platform rotation is controlled with speed control system and tilting has no speed control feature.
