

What to do if the spacing between network cabinet columns is too small

According to the size of the computer room, list all the equipment to be installed in the cabinet and their complete measurement data: length, width, height, weight.

Intumescent plugs and firestop sleeves that expand from heat and tightly seal the space are among the most widely used solutions. Doors should be made of refractory materials to provide ...

A rule of thumb is to allow up to 6 standard floor tiles (600×600mm) as a space onto which to place a server rack. Server racks and cabinets should not be installed underneath or too ...

Placement of your server racks and cabinets can make a significant short and long term difference. This article will discuss the most important factors in server rack positioning and provide ...

When this cannot be met, aisle spacing should meet safety requirements. The width of the walkway between the side of the cabinet and the wall should not be less than 1000mm; the width ...

Intumescent plugs and firestop sleeves that expand from heat and tightly seal the space are among the most widely used solutions. Doors should be ...

When designing a data center, the first step is to choose the right type of rack for your particular use case. Next, you need to ensure that the rack or cabinet has the right dimensions to ...

If you are shopping for a network cabinet, just go for deepest and tallest you can. Further down the line, you will likely wind up with a better switch that is just an inch deeper or a NAS that is ...

The space between the front and rear rails, called the "U pocket," is best reserved for rackmount equipment. To maximize space, many customers are installing equipment such as power distribution ...

Rack enclosures must have access points for power at the bottom of the rack, and access points for data pathways at the top of the rack. Rack depth is usually not a concern, but deep racks are ...

No clearance is required between the chassis and the sides of the rack or cabinet (no side airflow). The minimum spacing for bend radius for fiber-optic cables should have the front mounting posts of the ...
